## Squeeze Sludge, Squeeze Cost!!

### UP-Coming Event

Take a hard look at the AMCON VOLUTE Dewatering Press, an innovative Japan made sludge dewatering press, in the WEFTEC 2007.

AMCON NA, Inc. will proudly introduce ES-132 Twin Tank Model and ES-202 Single Tank Model in the WEFTEC2007.

### Innovative Design

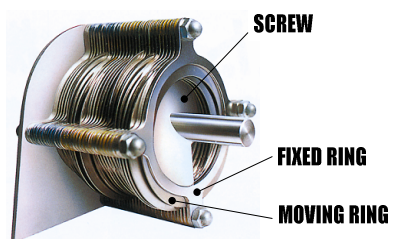

The VOLUTE Dewatering Press, originally developed by AMCON Inc. offers many advantages over current sludge management practices.

Layers of spacers, fixed and moving rings construct the dewatering cylinder. Moving rings, which are slightly smaller than the outer diameter of the screw and slightly narrower than the spacers, are located between the fixed ring. Edge of the screw pushes these moving rings in continu-

ous circular motion.

The moving rings continuously clean sludge out of the gaps, prevents clogging and reduces the use of rinsing water.

**1000th is a step close!**  
950 VOLUTE Series are operating in Japan and overseas including the US and Canada. We are expecting to make our 1000th sales in this year!

## Huge advantages in a small body!!

### All-In-One Design

The VOLUTE Dewatering Press has built in flow control tank, thickening, and dewatering chamber, which eliminates the need for pre-thickening and storage facility of sludge.

### Low Operational Cost

Clog-proof design of the VOLUTE Dewatering Press reduces the amount of rinsing water to rinse out.

It also consumes less electricity than conventional dewatering equipment.

### Automatic Operation

Built-in timers allow the VOLUTE Dewatering Press to operate fully automatic.

The VOLUTE Dewatering Press works for you 24 hours, 7days unattended!
